

Buried Service Placement Form

In a continued effort to protect your underground utilities, it is important that you understand the placement process of the following services: Telephone, Broadband and/or TV Cable installation.

Before Benton Communications buries the underground cable, we flag a proposed route. We then call Gopher State One Call, which locates the commercial utilities buried near our proposed route (ex. telephone, cable, electric, natural gas, etc.) It is the owner's responsibility to notify Benton Communications of any other service that were placed underground by completing the diagram below (ex. private power, invisible fence, sprinkler system, propane line, well, septic, etc.) to the best of your knowledge. Benton Communication & its contractors will not be liable for damages to private underground facilities that are not disclosed on this form. We understand you, the home owner, may not know the exact location of the facilities but we must be made aware they are present. Filling out the diagram below will help us avoid privately owned underground facilities in your yard. It is our goal to make this a seamless transition and to minimize challenges in your yard.

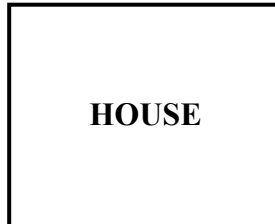

Name: _____ Current Phone #: _____

Address of Underground Installation: _____

PLEASE DRAW A DIAGRAM OF YOUR BURIED SERVICE BELOW

Check here if no privately owned underground facilities.

Check here if you have a sprinkler system.

_____ Main road driveway comes off of.

*** Please mark on House above where your utility room is located.**
